

**Amendment to the Claims:**

This listing of claims will replace all versions, and listings, of claims in the application:

**Listing of Claims:**

Claims 1-37 (Cancelled)

38. (New) A fraud identification and recovery system comprising:  
a user interface including a generally planar video display panel having a viewing area on one side thereof and at least one data input device;  
a digital camera having a lens defining a field of vision relative thereto;  
means adapted for securing the digital camera proximate to the display panel on a side opposite the viewing area such that the field of vision thereof is directed to the viewing area;  
means adapted for obscuring the digital camera from perception from within the viewing area;  
sensing means adapted for sensing data input on the data input device;  
means adapted for receiving digital visual content from a first storage area of an associated data storage;  
display generation means adapted for generating a display corresponding to received digital content on the display panel in accordance with an output of the sensing means;  
means adapted for enabling the digital camera after activation of the display generation means;  
means adapted for acquiring digital image from the viewing area via the digital camera upon activation thereof; and  
means adapted for storing an acquired digital image.

39. (New) The system of claim 1 further comprising:  
at least one additional digital camera having a lens defining a corresponding field of vision relative thereto

means adapted for securing each additional digital camera proximate to the display panel on a side opposite the viewing area such that each camera has a field of vision thereof that is directed to a unique relative viewing area;

means adapted for obscuring each additional digital camera from perception from within the viewing area;

means adapted for enabling each additional digital camera after activation of the display generation means;

means adapted for acquiring digital image from the viewing area via each additional digital camera upon activation thereof; and

means adapted for storing an acquired digital image from each additional digital camera.

40. (New) The system of claim 1 further comprising:

means adapted for receiving user identification data via the data input device; and

means adapted for selecting digital visual content in accordance with received user identification data.

41. (New) The system of claim 2 wherein each camera is positioned at a unique angle relative to the viewing area.

42. (New) A method of fraud identification and recovery comprising the steps of:  
securing a digital camera proximate to a display panel on a first side an associated viewing area of a device user interface such that a device user's field of vision is directed to a viewing area on an opposite side of the display panel;

obscuring a digital camera from perception from within the viewing area;

directing the digital camera to the first side of the viewing area;

sensing data input on a data input device associated with the device user interface;

receiving digital visual content from a first storage area of an associated data storage;

generating a display corresponding to received digital content on the display panel in accordance with an output of the sensing means;

enabling the digital camera after activation of the display generation means;

acquiring digital image from the viewing area via the digital camera upon activation thereof; and  
storing an acquired digital image.

43. (New) The method of claim 5 further comprising the steps of:  
securing at least one additional digital camera proximate to the display panel on a side opposite the viewing area such that each additional camera has a field of vision thereof that is directed to a unique relative viewing area;  
obscuring each additional digital camera from perception from within the viewing area;  
enabling each additional digital camera after activation of the display generation means;  
acquiring digital image from the viewing area via each additional digital camera upon activation thereof; and  
storing an acquired digital image from each additional digital camera.

44. (New) The system of claim 6 further comprising the steps of:  
receiving user identification data via the data input device; and  
selecting digital visual content in accordance with received user identification data.
